dataset / attribute	type	meaning
/ParticleIDs	uint64[n]	sorted, unique; the set itself
format, version	str, int	"cosmoviewer-selection-set", 2 (v1 still read)
name, colour, n	str, "#rrggbb", int	as shown in both applications
created, made_in, source_snapshot	ISO time, str, file name	provenance
kind	ids | group | region | query	how the set was made
definition	JSON	e.g. finder fof, group 1, b 0.2, min_size 32
defined_at	JSON	file, index, time, redshift of evaluation
complete	yes | no | unknown	every member present?
n_expected	int (−1 unknown)	e.g. a group's length, 34,120
incomplete_reason	str ("" unknown)	display_sample or missing_in_file; hand edits keep it

version 2: population record

Fig. 3. The selection-set file (one HDF5 file per set, <run>/cosmoviewer_sets/<name>.hdf5). The IDs are the set; the attributes below the green rule say what it means and whether it is whole.
